

# Innovative and Efficient Development of Medical Products

## Professional Projectmanagement and Creative Marketingconcepts

A global paradigm change of the medical sector includes an optimized medical care of the population and a capital investment which primarily is induced by innovations. The growth of the healthcare sector is driven by the risen world population and the increased wealth in lots of countries. Furthermore the demographic change of industrialized countries, new possibilities for financing medical technology and especially the progress in medical technology play an important role. The scientific institute senetics, a successful partner of the healthcare sector and extern department for business development, research and development, supports its customers in an inimitable way. Thanks to a wide experience concerning the development of projects and products combined with an entrepreneurial know-how within the consulting sector – senetics helps its customers to achieve acceptance of the challenging competition. New ideas are generated, growth potential will be identified and converted into successful products.

Analysing the market and the technology itself is essential for a careful decision making and if the idea of a product should be picked up as a project or not. In 2009 Spectaris, BMBF and senetics found out that between 1995 and 2005 the subarea of implants and protheses increased by 12.5 per
